Prompt differential diagnosis is essential since skin lesions in linear IgA. The lesions were then excised on two separate sessions without recurrence. Unfortunately, at times there can be a mixed linear deposition of both IgG and IgA at the basement membrane which creates a diagnostic conundrum. It is a chronic, recurrent disease with polymorphic skin eruptions and pruritus.

Recently, several forms of PR considered atypical for the course of the disease can be associated with some inflammatory bowel disorders, drug-induced, neoplasm or idiopathic [ 1 ]. Article Figures.
