A coal fired plant in the US Midwest had plans to replace their entire finishing superheater based on what they considered a long service life, even though no failures had occurred. Structural Integrity provided an independent assessment of a repowered vintage steam turbine, after the OEM had recommended replacement.

Congdon called attention to steam purity degradation that can take place over time. Are the gas turbines equipped with exhaust bypass ducts that permit operation of the gas turbines with their associated boilers shut down? First thing she n Verify mechanical integrity.

When the unit tripped, excessive pressure difference pushed these seals forward.
